

CUMMINS LOCOMOTIVE POWER – KV & QSKV

Cummins has strengthened its product range in the locomotive market. Alongside the KV series of Locomotive engines being offered up to 2000hp (1492kW) with Cummins CENTRY electronics as standard, a new range of QSK Locomotive engines are being released. The new **QSK45-L** and **QSK60-L** locomotive engines are available from 1500hp (1119kW) up to 2500hp (1865kW). These engines have 80 percent of the parts "brand-new" and offer Cummins locomotive opportunities beyond the current product range. General-purpose locomotives up to 2500hp are now within reach of these new engines, setting a new standard of productivity in Locomotive applications. The main product benefits are:

- 25% higher horsepower
- Projected engine life well beyond 20,000 hours
- Service intervals up to 500 hours
- Lower emissions
- All major components can be rebuilt, saving money.
- Cummins PRELUB starter protection fitted as standard
- Cummins ELIMINATOR oil purification system which eliminates oil filter changes is fitted as standard on the QSK60 and optional on the QSK45
- Cummins CENTINEL oil replenishment system which increase oil change intervals up to 4,000 hours is optional for both engines
